1 [Security: A novel secure wireless video surveillance system based on Intel IXP425 network processor](#)

Hao Yin, Chuang Lin, Berton Sebastien, Xiaowen Chu

October 2005 **Proceedings of the 1st ACM workshop on Wireless multimedia networking and performance modeling WMuNeP '05**

Publisher: ACM Press

Full text available: pdf(399.19 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper presents the design of a novel high-secure wireless video surveillance system. The system is based on the 802.11g ad-hoc wireless infrastructure; and the Intel IXP425 network processors are used as the basic processing unit. A media-dependant video encryption scheme, including reliable data embedding technique and real-time video encryption algorithm, has been implemented for the system to work in an open and insecure wireless environment. Our system offers several unique advantages: ...

We investigate whether it is possible to encrypt a database and then give it away in such a form that users can still access it, but only in a restricted way. In contrast to conventional privacy mechanisms that aim to prevent *any* access to individual records, we aim to restrict the set of queries that can be feasibly evaluated on the encrypted database. We start with a simple form of database obfuscation which makes database records indistinguishable from lookup functions. The only feasible ...

Darko Kirovski, Henrique Malvar, Yacov Yacobi

 December 2002 **Proceedings of the tenth ACM international conference on Multimedia MULTIMEDIA '02**

Publisher: ACM Press

Full text available: pdf(262.42.KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

We present a new dual watermarking and fingerprinting system, where initially all copies of a protected object are identically watermarked using a secret key, but individual detection keys are distinct. By knowing a detection key, an adversary cannot recreate the original content from the watermarked content. However, knowledge of any one detection key is sufficient for modifying the object so that a detector using that key would fail to detect the marks. Detectors using other detection keys would ...

 May 2003 **Proceedings of the 3rd ACM/IEEE-CS joint conference on Digital libraries JCDL '03**

Publisher: IEEE Computer Society

Full text available: pdf(203.18.KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

A novel algorithm for speech watermarking through parametric modeling is enhanced by inclusion of a quantified fidelity criterion. Watermarking is effected through solution of a set-membership filtering (SMF) problem, subject to an l_∞ fidelity criterion in the signal space. The SMF approach provides flexibility in obtaining watermark solutions that trade-off watermark robustness and stegosignal fidelity.
